

Unit 1: Local Traffic

The transportation system that provides efficient movement of freight is made up of several modes, vehicles or equipment used to move commodities through the value chain. Freight value is lost if the freight is not moved in the least time and at the least cost. Freight value is lost if the freight is not moved in the least time and at the least cost.

Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.

The system of transportation

1. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.
2. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.
3. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.
4. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.
5. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.
6. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.

The system of transportation is made up of several modes

The system of transportation is made up of several modes. Freight is the value that is transferred and moved from one to another through the <http://www.transportation.com> system.
